What's new in version 4?

1. ModenaCam 4 has been completely rewritten from scratch using high quality OOP code based on the CodeIgniter framework.
2. The MySQL connection is done through PDO which guarantees SQL injection protection, compared to `mysql_real_escape_string()` which is not 100% safe.
3. We use advanced caching technologies, such as MySQL memory tables, and for high end sites we provide Memcache technologies. This decreases the server load by storing the most accessed session tables in memory, bringing a close to 90% performance increase.
4. The Flash interface has been rewritten and in-chat tip notices, HD broadcasting support through Flash Media Live Encoder or Wirecast have been added.
5. Supported chat sessions are Free, Nude, Private, True Private and Peek mode.
6. Performers are able to create both paid videos and photo galleries.
7. We have completely redesigned the payout system. The system automatically generates the payouts for studios and performers on the 1st and on the 15th of every month.
8. Performers are able to ban countries and US states.
9. The FMS can be load balanced. You can add as many servers as you need and the system will balance the load automatically between them.
10. All the forms on the site are 2257-compliant in order to make administration easier.
11. ModenaCam 4 is CDN-compatible for delivering static content.
12. After-session reviewing system.
13. A new, HTML5-compatible design.
14. A more advanced search engine.
15. All user actions are logged.
16. A simpler, easier to understand codebase lowers the amount of time needed to develop and integrate new features.
17. Brute force protection and other customized security features.
